

New title:

“Multi-analytical approach for the study of an ancient Egyptian wooden statuette from the collection of Museo Egizio of Torino”

*Luisa Vigorelli, Alessandro Re, Laura Guidorzi, Tiziana Cavaleri, Paola Buscaglia, Marco Nervo, Paolo Del Vesco, Matilde Borla, Sabrina Grassini, Alessandro Lo Giudice*

### Major points of extension:

Generally, a detail overview of all the scientific analysis (as well as the x-ray imaging techniques described in the conference paper) is given, in particular the extension regards:

- the description of the analytical techniques used and the relative instrumentation (sub-section 3.1);
- the obtained results from the different analysis, sort by different topics, that allows the readers to easily understand the general framework of the study (entire section 4);
- the addition of future works perspective (in the introduction and conclusions);
- widely extended bibliography;
- the addition of an author (L.Guidorzi) that contributed to some data analysis and results discussion with the other co-authors.
