

Dear Editors,

In the extended paper “Clinical Computed Tomography and Surface-Enhanced Raman Scattering characterization of ancient pigments”, we have enriched the research with more information about computed tomography technique details; we have added also more SERS spectra and we inserted FTIR data analysis. All the changes are highlighted in yellow.

Thank you for the opportunity to publish our research topic in the Special Issue of Acta IMEKO.

We are very pleased to be part of it.

Kind regards

The Authors
